DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the sixth paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-14 are rejected under 35 U.S.C. 112, sixth paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claims 1, 2, 5, 8, 9, 12, the word "means" is preceded by the word(s) "measurement" in an attempt to use a "means" clause to recite a claim element as a means for performing a specified function. However, since no function is specified by the word(s) preceding "means," it is impossible to determine the equivalents of the element, as required by 35 U.S.C. 112, sixth paragraph. See *Ex parte Klumb*, 159 USPQ 694 (Bd. App. 1967).

The claims not specifically mentioned are indefinite since they depended from one of the above claims.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Application/Control Number: 10/659,545

Art Unit: 3747

4. Claims 1-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Iwakiri et al (US 5,206,809).

Regarding claim 1, the reference of Iwakiri et al discloses a method of adjusting a knock detection system for a piston engine having at least first and second cylinders (col. 4, lines 37-38), wherein the knock detection system comprises at least first and second sensors (13) for said first and second cylinders respectively (col. 5, lines 13-25) and a measurement means connected to the sensors, whereby the measurement means provides first and second signals indicating intensity of knocking in the first and second cylinders respectively, and wherein the measurement means has at least first and second adjustment variables for adjusting the ranges of said first and second signals respectively (col. 2, line 45 through col. 3, line 38), said method comprising:

running the engine at a selected load less than full load (col. 12, lines 3-15),

adjusting the first adjustment variable to bring the range of the first signal within preset limits and storing a corresponding value of the first adjustment variable (above discussions, col. 5, lines 28-60, and col. 12, line 28 through col. 13, line 17), and

adjusting the second adjustment variable to bring the range of the second signal within said preset limits and storing a corresponding value of the second adjustment variable (above discussions).

Regarding claims 2-3, and 6-7, as discussed in above rejected claim.

Regarding claims 4-5, the reference of lwakiri et al further discloses detection signals are voltage signals (col. 5, lines 13-18).

Regarding claims 8-14, as discussed in claims 1-7.

Application/Control Number: 10/659,545

Art Unit: 3747

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's

disclosure. The copies of U.S Patent are provided.

Torno et al (US 6,662,781 B1), Honda (US 6,246,952 B1), and Sakakibara et al (US

5,134,980).

6. Any inquiry concerning this communication or earlier communications from the examiner

should be directed to Johnny H. Hoang whose telephone number is (703) 308-2782. The

examiner can normally be reached on Monday - Thursday (7:00Am-5: 30Pm).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Henry Yuen can be reached on (703) 308-1946. The fax phone number for the

organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private

PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
